

# Can Your Elevator Think Outside the B<sup>o</sup>x?

You've got too much riding on your elevators than to rely on outdated technology. And why chance it on some one size fits all "cookie cutter" intercom system, that you know just won't cut it? What you need goes far beyond the four walls of your elevator. RING Communications offers the most technologically advanced, most reliable, and easy to use internal communications and security systems in the world. RING Communications has systems for a single elevator, a bank of elevators, or an entire building complex teeming with elevators. All offer RING's modular design for maximum flexibility, easy maintenance, and seemingly endless expandability. RING's cutting edge technology allows us to take full advantage of existing resources saving you installation costs that would be better spent on communication and security features, rather than just running wires. The point is that "the same old, same old" way of thinking about elevator intercoms, and how they tie into your facilities operation simply won't get you to where you want to be. An elevator's intercom system should never be a problem. It should be a solution. RING Communications is jam packed with solutions. So start thinking outside of the elevator cab. Let RING Communications take you where you want to go.
